 The World of Economics: Навч. посібник. – Львів:
 Видавничий центр ЛНУ імені Івана Франка, 2007. – 340 с.
 ISBN 978-966-613-541-7

Посібник *The World of Economics* складається з двох основних частин, а також двох додатків, у яких подано інформацію про Львівський національний університет та економічний факультет ЛНУ. Перша частина складається з восьми уроків-блоків (Units), які охоплюють основні питання економічної теорії. Друга частина поділена на шість уроків, у яких розглянуто базові поняття відповідних спеціальностей економічного факультету. Кожний урок-блок складається з фахового економічного тексту, лексичних і граматичних вправ, проектів з використанням інформації з Інтернету, письмових завдань на розвиток професійних навичок. Завдання та вправи в усіх розділах підручника розраховано на студентів з середнім та вищим рівнем мовної компетенції.

Для студентів економічного факультету.

Вступ

Посібник призначено для студентів першого та другого курсів економічного факультету. Структурно він складається з двох частин. Перша – присвячена основним питанням економічної теорії, поділена на вісім уроків: „Макроекономіка”, „Мікроекономіка”, „Попит і пропозиція”, „Типи економічних систем”, „Типи організаційних форм підприємництва”, „Економічна система України”, „Економічна система Великобританії”, „Економічна система США”. У другій частині розглянуто базові поняття відповідних спеціальностей економічного факультету. Вона складається з шести уроків: „Менеджмент”, „Банківська справа”, „Фінанси”, „Облік і аудит”, „Інформаційні технології”, „Маркетинг”.

З уроку в урок схема подання матеріалу залишається незмінною, що сприяє системності навчання. Стержнем кожного уроку є автентичний фаховий текст, до якого подано різноманітні лексичні вправи, вправи на розуміння прочитаного, закріплення термінологічних одиниць, розвиток комунікативних навичок, вдосконалення мовленнєвої компетенції. У кожному уроці на мовному матеріалі економічної тематики передбачено роботу над однією з таких граматичних тем: уживання часових форм дієслова в активному та пасивному станах, прислівників, прикметників, непрямої мови, артиклів, модальних дієслів, герундію, інфінітиву, умовного способу, дієприкметників зворотів і підрядних речень. Наприкінці уроку для закріплення пройденого матеріалу

запропоновано виконати проект з використанням інформації з Інтернету (посилання на відповідні веб-сторінки додано). Крім того, кожен урок другої частини містить розділ для самоконтролю, а також розділ, орієнтований на розвиток таких професійних навичок, як написання резюме, ділового електронного листа та факсу, заяви на надання банківської позики, складання бізнес-плану, балансового звіту та анкети для вивчення ринку.

Загалом посібник сприяє комплексному вивченню англійської мови професійного спрямування та інтегрованому розвитку мовленнєвих навичок.

Part I

UNIT 1. MACROECONOMICS

What is macroeconomics?
Do you know anything
about Keynesian Theory?
What is inflation and what
are two main inflation
theories?

Pre-reading tasks

I. Before you read the text make sure that you know the meanings of these words. Suggest their Ukrainian equivalents:

<i>aggregate, adj</i>	total; combined
<i>relative, adj</i>	connected (with); on the subject (of); relevant (to)
<i>to constitute, v</i>	to be or form something
<i>determinant, n</i>	something that decides, fixes, settles, or limits
<i>variable, n</i>	something which can vary in quantity or size
<i>distress, n</i>	the feeling of being extremely upset or worried

<i>consequence, n</i>	the result of an action or situation, especially a bad result
<i>rigidity, n</i>	being unable to bend or change easily
<i>persist, v</i>	to continue to exist
<i>deficiency, n</i>	the state of lacking something necessary
<i>correlate, v</i>	to (show to) have a close shared relationship or connection of cause and effect
<i>excessive, adj</i>	more than is necessary or wanted
<i>refinement, n</i>	a small change that improves something
<i>reconcile, v</i>	to find agreement between (two ideas, situations etc that seem to be in opposition)

II. Suggest the situations where you would use the words from Ex. 1.

Reading

I. Read the text and do the tasks that follow it:

¹Macroeconomics is a branch of economics concerned with the aggregate, or overall, economy. Macroeconomics deals with economic factors such as total national output and income, unemployment, balance of payments, and the rate of inflation. It is distinct from microeconomics, which is the study of the composition of output such as the supply and demand for individual goods and services, the way they are traded in markets, and the pattern of their relative prices.

²At the basis of macroeconomics is an understanding of what constitutes national income, and the related concept of gross national product (GNP). The GNP is the total value of goods and services produced in an economy during a given period of time, usually a year. The size of a country's potential GNP at any moment in time depends on its factors of production – labour and capital – and its technology. The

measure of what a country's economic activity produces in the end is called final demand. The main determinants of final demand are consumption (personal expenditure on items such as food, clothing, appliances, and cars), investment (spending by businesses on items such as new facilities and equipment), government spending, and net exports (exports minus imports).

³Macroeconomic theory is largely concerned with GNP and its relationship to such variables as unemployment and inflation.

⁴Keynesian theory and unemployment. Unemployment causes a great deal of social distress and concern; as a result, the causes and consequences of unemployment have received the most attention in macroeconomic theory. Until the publication in 1936 of *The General Theory of Employment, Interest and Money* by Keynes, unemployment was generally explained in terms of rigidity in the labour market that prevented wages from falling to a level at which the labour market would be in equilibrium. Equilibrium would be reached when pressure from members of the labour force seeking work had brought down the wage to the point where either some dropped out of the labour market (the supply of labour fell) or firms became willing to take on more labour given that the lower wage increased the profitability of hiring more workers (demand increased).

⁵Keynes's major innovation was to argue that persistent unemployment might be caused by a deficiency in demand for production or services. Such a deficiency of demand could be explained by a failure of planned investment to match planned savings. Savings constitute a leakage in the circular flow which would tend to reduce the level of total demand. "Real" investment, known as capital formation (the production of machines, factories, housing, and so on), is an injection into the circular flow relating income to output and tends to raise the level of demand.

⁶Keynes's emphasis on demand as the key determinant of output in the short run stimulated developments in many

other fields of macroeconomics. It was partly instrumental in the development of national income accounting, which measures the components of GNP – consumption, investment, government spending and net exports.

⁷Inflation and money supply. For several decades after World War II the main inflation theories were demand-pull and cost-push. The cost-push theory basically emphasized the role of excessive increases in wages relative to productivity increases as a cause of inflation, whereas the demand-pull theory tended to attribute inflation more to excess demand in the goods market caused by expansion of the money supply. A central concept in inflationary theory since the mid-1950s has been the Phillips curve, which relates the level of unemployment to the rate of inflation.

⁸Theories regarding the money supply are also central to macroeconomics. They are also the subject of debate between Keynesians and monetarists (economists who believe that growth in the money supply is the most important factor that determines economic growth). The classical pre-Keynes view was that the interest rate led to a balance between savings and investment, which in turn would cause equilibrium in the goods market. Keynes disagreed and believed that the interest rate was largely a monetary phenomenon; its chief function was to balance the unpredictable supply and demand for money, not savings and investment.

⁹Modern theories. During the last few decades there have been numerous refinements of the Keynesian theory of unemployment. Significant progress has been made in explaining wage rigidity without appealing to trade union behaviour or government regulation. At first it seemed difficult to reconcile the notion of wage rigidity with the usual economist's assumption that people want to maximize utility or satisfaction and would be willing to accept a lower wage in order to get a job. However, by widening the range of variables such variables as loyalty and self-respect are included, it has become easier to reconcile labour market disequilibrium with the usual assumptions of optimizing behaviour.

¹⁰Large macroeconomic models are also used in economic forecasting to make predictions of output and employment. During the last few years, the record of most such predictions has been poor, and an analysis of the errors has led to continual revisions of the basic models and refinements of the theory.

(Microsoft® Encarta® Encyclopedia, 2002)

Vocabulary notes

gross national product – валовий національний продукт;

government spending – державні видатки;

factors of production – фактори виробництва;

deficiency – нестача;

circular flow – схема потоку;

interest rate – процентна ставка;

demand-pull inflation – інфляція попиту;

cost-push inflation – інфляція витрат;

economic forecasting – економічне прогнозування.

Comprehension check

I. Read the first paragraph and give the definition of the term “Macroeconomics”.

II. Look through the second and third paragraphs and answer the following questions:

1. What is at the basis of macroeconomics?
2. What is GNP (Gross National Product)?
3. What is final demand and what are its main determinants?

III. Scan the paragraphs about the Keynesian theory and unemployment (fourth-sixth) and decide whether the following statements are true or false:

1. Only in Keynes's theory large-scale unemployment was explained in terms of rigidity in the labour market that prevented wages from falling to a level at which the labour market would be in equilibrium.
2. "Real" investment can help to raise the level of demand.

3. The Keynesian approach is extremely helpful in the development of the national income accounting.

IV. Examine the seventh paragraph and describe the Phillips curve.

V. Skim the eighth paragraph and explain the difference between pre-Keynes view and Keynes's view regarding the money supply.

VI. Look at the last two paragraphs and say how the Keynesian theory was refined during the last decades.

Vocabulary

I. Find the words in the text which mean the following. To help you, some letters of the missing words are given and the number of dashes corresponds to the number of missing letters:

1. Clearly different or separate.

d _____

2. To stop something happening or to stop someone doing something.

p _____

3. Helpful; being the cause of.

i ___ r ___ t _

4. Discussion or argument about a subject.

d _____

5. Something that exists or happens, usually something unusual.

p ___ o ___ n

6. The rate at which goods are produced.

p ___ c ___ y

7. A line which bends round like part of a circle.

c _____

8. Many

n _____

9. Something that is taken as a fact or believed to be true without proof.

a ___ m _____

10. A report saying what is likely to happen in the future.

f -----

II. Match the terms on the right with their definitions on the left:

- | | |
|---|--------------------------|
| 1. A theoretical relationship between the unemployment rate of a given economy and rates of (wage) inflation. | a) savings |
| 2. A measure of those individuals in the labour force working, at least one hour per week, for pay. | b) relative price |
| 3. A situation where there is no tendency for change | c) inflation |
| 4. A ratio of any two prices or one particular price compared to a price index. | d) the Phillips Curve |
| 5. A measure of the satisfaction received from some type of economic activity. | e) unemployment |
| 6. Changes to the existing capital stock or business inventories. | f) utility |
| 7. The difference between income and expenditure in the current time period. | g) equilibrium |
| 8. The difference between the number of people in the labour force and those working for pay. | h) factors of production |
| 9. An exhaustive list of inputs required for any type of production. | i) investment |
| 10. An increase in the price level over some defined period of time. | j) employment |

III. Substitute the italicized parts of the sentences using one of the words and word combinations from the lists in brackets:

1. Women *constitute* more than sixty per cent of the company's workforce (comprise, establish, create, appoint).

2. We must try to keep the opposing economic forces in *equilibrium* (equanimity, evenness, serenity, balance). 3. Considering the *smallness* of the car, it is *relatively roomy* inside (comparatively, reasonably, somewhat, proportionately). 4. America has *produced* more cars than ever this year (made, yielded, composed, generated). 5. They have offices in *various parts* of the country (numerous, miscellaneous, different, mixed). 6. The scandal led to his *resignation* (guided, caused, induced, commanded). 7. The organization will need a massive *injection* of government money (investment, instilment, vaccination, introduction). 8. We *hired* an advertising company to help sell our new product (rented, leased, enlisted, took on). 9. A number of *potential buyers* have *expressed interest* in the building (budding, latent, promising, possible). 10. There has been a sudden 50% *growth* in the market for home computers (deepening, expansion, enlargement, amplification).

IV. In the text find the words with the opposite meaning to the words given below:

decrease, v

divestment, n

enhance, v

shorten, v

loss, n

exclude, v

sufficiency, n

agree, v

group, n

rich, adj

V. Suggest English equivalents of the following words and word combinations:

Загальний обсяг виробництва; безробіття; платіжний баланс; темп інфляції; попит і пропозиція; відносні ціни; національний дохід; валовий національний продукт; факто-ри виробництва; кінцевий попит; споживання; інвестиції; державні видатки; чистий експорт; процент; ринок праці; рівновага; прибутковість; нестача; заощадження; витік; схема потоку; загальний попит; залучення капіталу; рівень виробництва; обчислення національного доходу; інфляція попиту; інфляція витрат; крива Філіпса; процентна ставка; незмінюваність зарплати; профсоюз; державне регулюван-ня; корисність, ефективність; економічне прогнозування.
